## Phenolic Cabinets

Our modular phenolic cabinets are designed and engineered for maximum durability to meet your store needs. This material has very high-performance standards that include moisture resistance, scratch resistance, fire rated, and NSF certification.

Some of the key features included in our cabinets are electrical cut-outs, open backs, removeable bottoms and an integrated chase if needed.

In addition to supporting your store's operational needs, we understand the value of maintaining your brand image, which is why our modular cabinets are designed to support various materials.
